open source

open science

2

In thinking about Open Scholarship, I'm generally thinking of three things: open access publications, open source software, and open science (by which I mean open data, methods, and materials).

I'm going to focus mostly on Open Access publications, and on academic scientists.

Concerns in the humanities can be quite different, and I'm going to focus on what I know best, which is the situation in science.

About me

- ▶ Applied statistician working in genetics
- ▶ Co-author on 170 papers and 1 book
- ▶ Reviewer for 90 different journals
- ▶ Formerly
 - Associate editor and Senior editor at *Genetics*
 - Associate editor at *Biostatistics*
 - Associate editor at *Journal of the American Statistical Association*
 - Academic editor at *PeerJ*
 - Editorial Board member of *BMC Biology*

kbroman.org/broman_cv.pdf

3

I thought I should say a bit about my experience with the publication process.

My research spans genetics and statistics, but the majority of my publications are in the genetics or biology literature; I only have a couple of papers in statistics journals.

I've reviewed for a lot of different journals, and I spent a decade as an editor for the society journal, *Genetics*.

Data Organization in Spreadsheets

Karl W. Broman^a and Kara H. Woo^b

^aDepartment of Biostatistics & Medical Informatics, University of Wisconsin-Madison, Madison, WI; ^bInformation School, University of Washington, Seattle, WA

ABSTRACT

Spreadsheets are widely used software tools for data entry, storage, analysis, and visualization. Focusing on the data entry and storage aspects, this article offers practical recommendations for organizing spreadsheet data to reduce errors and ease later analyses. The basic principles are: be consistent, write dates like YYYY-MM-DD, do not leave any cells empty, put just one thing in a cell, organize the data as a single rectangle (with subjects as rows and variables as columns, and with a single header row), create a data dictionary, do not include calculations in the raw data files, do not use font color or highlighting as data, choose good names for things, make backups, use data validation to avoid data entry errors, and save the data in plain text files.

data organization organizing data in spreadsheets

My collaborators sometimes ask me, "In what form would you like the data?" My response is always, "In its current form!" If the data need to be reformatted, it's much better for me to write a script than for them to do a bunch of cut-and-paste. I'm a strong proponent of data analysts being able to handle any data files they might receive.

But in many cases, I have to spend **a lot** of time writing scripts to rearrange the layout of the data. And how would you like your data analysts to spend their time? Reorganizing data, or really analyzing data?

Most of my collaborators enter and store their data in spreadsheets, and mostly Microsoft Excel. Before starting to enter data into a spreadsheet, it's good to spend some time thinking about the layout. The way that you organize the data in spreadsheets can have a big impact on your data analyst's quality of life.

This is a tutorial on that topic: *how to organize data in spreadsheets*. For complex, high-dimensional data, it may be better to use a formal database. But for many projects, spreadsheets are perfectly fine. But data in spreadsheets can be pretty and easy to work with, or they can be a sloppy mess requiring serious downstream reorganization efforts. We want to avoid the latter.

I don't think these ideas come naturally to anyone. So if you're not happy with the structure of your current data files, don't despair! And also don't apply tedious and potentially error-prone hand-editing to revise the arrangement. Rather, apply these principles when designing the layout for your next dataset, to help make analyses easier.

- [Be consistent.](#)
- [Write dates as YYYY-MM-DD.](#)
- [Fill in all of the cells.](#)

Personal timeline

What has changed?

- ▶ Rise of preprints in biology
- ▶ Rise of *Nature Communications*
- ▶ PubMed Central: expansion, with no embargo
- ▶ Emphasis on computational reproducibility

What hasn't changed?

- ▶ Attachment to Impact Factor
- ▶ Attachment to Science, Nature, and Cell
- ▶ Researchers don't read much

13

The journal Genetics recently sent out a newsletter that included an announcement of new associate editors. The bio for one of them had “...including more than 30 articles in Nature, Science, Cell, and Nature Genetics.”

Barriers to OA

- ▶ Most scientists don't seem to care
- ▶ Cost
